

“We believe it’s going to work and that it’s going to change everything.” –p.32

## Front

- 2 Letter from the editor

### THE DOWNLOAD

- 9 Bringing the internet to submerged Roman ruins; micro-cars for people with disabilities; the sound of diversity; solar panels for better crops; a new ocean exploration vessel; and our new feature: Greater Than/Less Than/Equal To.

### PROFILE

- 20 **Chasing bugs on the blockchain**  
In the crypto ecosystem, programming errors can mean \$100 million lost in the blink of an eye. Ronghui Gu is trying to help. By Clive Thompson

### THE DATA

- 22 **Hot spots of scarcity**  
Extreme heat will kill more people as the world warms. Poorer countries will bear the brunt of that burden. By Hana Kiro

## The Innovation Issue

### 25 10 Breakthrough Technologies 2023

For better or sometimes worse, these 10 innovations—from CRISPR for high cholesterol to image-making AI to cheap military drones—will shape our world in the coming years.

### 32 A factory of unlimited organs

Martine Rothblatt sees a day when transplantable organs and 3D-printed ones will be readily available, saving countless lives—including her daughter’s.

BY ANTONIO REGALADO

### 40 The year creativity exploded

A revolution in image generation is here—and nothing will ever be the same. BY WILL DOUGLAS HEAVEN

### 48 How old batteries can help the clean energy transition

Companies like Redwood Materials hope recycling will address shortages of key materials and make batteries more sustainable. BY CASEY CROWNHART

### 56 How a telescope broke the universe

A firehose of data from the James Webb Space Telescope started streaming down in July. Astronomers were ready and waiting. BY JONATHAN O’CALLAGHAN

### 66 A new US innovation narrative

Legislation investing hundreds of billions into industry and R&D could reset how we think about government’s role in the economy. BY DAVID ROTMAN

## Back

- 70 **Are robots the solution to Japan’s care crisis?**  
Inside the country’s long experiment in automating elder care. By James Wright

### 76 Lumbering back to the lunar surface

The US is relying on relics from the shuttle program to get astronauts back to the moon. It’s a rough start. By Rebecca Boyle

### 82 Demo

3D-printing pioneers Ron Rael and Virginia San Fratello transcend the boundaries of technology, art, and activism. By Allison Arieff

### BACK PAGE

- 88 **What didn’t make the list**  
Our editors considered more than 50 possibilities for this year’s Breakthrough Technologies list. These didn’t make the cut. By Amy Nordrum
