

“We’ve upgraded everything else in our society—why not democracy?”
—p. 40

Front

- 2 From the editor

THE DOWNLOAD

- 7 How AI can help us understand how cells work; replicating nature’s strongest material; China’s autonomous-driving edge; in India, a library for everyone; the end (maybe) of the captcha wars; and more.

EXPLAINED

- 16 **Here’s what we know about lab-grown meat and climate change**
Cultivated meat is coming to the US. Whether it’ll clean up emissions from food is complicated. By Casey Crownhart

PROFILE

- 18 **Making sense of nature’s complexity**
Applied mathematician Gábor Domokos describes patterns and shapes in useful ways. By Elise Cutts

The hard problems issue

- 22 **We must stop making so much plastic**
Think that recycling will save the world? Think again.
BY DOUGLAS MAIN
- 30 **Machines like us**
Philosophers, cognitive scientists, and engineers are grappling with what it would take for AI to become conscious. BY GRACE HUCKINS
- 39 **Big problems that demand bigger energy**
Technology is all about solving thorny problems. Yet there are so many urgent issues facing the world—where should we even begin?
- 46 **Government can’t automate everything**
A look into the limits of technocratic government.
BY TATE RYAN-MOSLEY
- 52 **Pushing the limits of solar system exploration**
When it comes to spacecraft design, scientists and engineers must grapple with hard constraints.
BY DAVID W. BROWN

Back

- 64 **How to fix the internet**
If we want better online discourse, we need to move beyond the big platforms.
By Katie Notopoulos
- 70 **The advising algorithm**
Theoretical computer scientist Manuel Blum has guided generations of students.
By Sheon Han
- 76 **The quest for perfect security**
Cryptographers want encryption that can’t be cracked. The catch: it might not exist.
By Stephen Ornes

FIELD NOTES

- 82 **Reinventing shop class**
Girls Garage creates space for its students to build the world they want to see.
By Allison Arieff

PUZZLE

- 88 **Creative solutions**
By John-Clark Levin
