

"All of a sudden, Henry turns to me and says,  
 'Why can't that robot  
 be an extension of my body?'"

—p. 26

## Front

- 2 Letter from the editor

### THE DOWNLOAD

- 9 Designing cheeses with AI; growing glow-in-the-dark petunias; comics generated by AI; aviation maps; imagining a world of cheaper and more abundant energy. Plus, job of the future: AI prompt engineer.

### EXPLAINED

- 20 **Everything you need to know about artificial wombs**  
 Artificial wombs are nearing human trials. But the goal is to save the littlest preemies, not replace the uterus.  
 By Cassandra Willyard

### PROFILE

- 22 **Taking shape**  
 Architect Emily Baker starts with paper and scissors to find better ways to build.  
 By Sofi Thanhauser

ON THE COVER  
 Illustration by  
 R. Kikuo Johnson

## Build

- 26 **The robots we've always wanted**  
 Cover story: More data, better AI, and cheaper hardware are helping researchers take a step closer to the dream of useful household robots.

BY MELISSA HEIKKILÄ

- 34 **How to stop the sinking**  
 Louisiana's southwestern coastline faces some of the most severe climate predictions in the US. Can a government-led project build the area up and out of crisis?

BY XANDER PETERS

- 44 **Stations in the sky**  
 As the International Space Station reaches the end of its life, the private sector is looking to step in and build a permanent presence in low Earth orbit.

BY DAVID W. BROWN

## Back

- 58 **Changing our minds**  
 The space race grabbed headlines, but the mind-control race changed America forever. By Annalee Newitz

- 64 **The great hydrogen train**  
 How best to decarbonize rail transportation is a political question as much as a technological one.  
 By Benjamin Schneider

- 68 **Quartz, cobalt, and the waste we leave behind**  
 Three books reveal just how dependent we are on physical materials—and the toll the extraction takes on humans and the environment.  
 By Matthew Ponsford

- 74 **Track the police**  
 New AI programs that analyze bodycam recordings promise more transparency. Not everybody is happy about it.  
 By Patrick Sisson

- 80 **No more users**  
 If artificial intelligence is now a thought partner, what are we?  
 By Taylor Majewski

### FIELD NOTES

- 84 **A shelter in the snow**  
 In Finland, snow dens protect seal pups from a harsh climate. Building them now requires human assistance.  
 By Matthew Ponsford

125

- 88 **Taking inspiration from Daedalus**  
 For centuries, people have imagined using technology to overcome physical limits.  
 By Bill Gourgey
